

GPT vs. Claude and Data Privacy Checklist

1. GPT vs. Claude on a Coding Task

GPT: Usually provides faster solutions, strong code explanations, and good debugging support. Helpful when you need working code quickly.

Claude: Often produces well-structured code with detailed reasoning. Helpful for understanding logic and reviewing larger code blocks.

Both models are useful for coding. GPT is often preferred for quick development and debugging, while Claude is strong for detailed explanations and code reviews.

2. Data Privacy Checklist for Third-Party LLMs (Guest PII)

- Only need to share the minimum data required for the task.
- Remove or mask personal information such as names, phone numbers, email addresses, and IDs whenever possible.
- Check the vendor privacy policy before uploading data.
- Do not upload sensitive guest information without approval.
- Use secure accounts and strong authentication.
- Review generated outputs to ensure no private data is exposed.
- Delete uploaded files and conversations when they are no longer needed.
